

# GIRAPLAN®

## Frequency Planning Module

### GENERAL

The GiraPlan® Frequency Planning Module enables you to optimise your use of frequencies. It helps you with the frequency coordination by providing efficient tools for planning and network design.

GiraPlan® is integrated with a complete professional GIS (Geographic Information System), the ESRI ArcGIS, which makes handling of geographical data easy.

The Frequency Planning Module is one of the main modules in the GiraPlan® software suite. Other modules to support you in the network planning process are: Network Planning Module and Network Verification Module.

### PRODUCT FEATURES

- Coordination calculations in accordance with GE-06, Chester 97, Wiesbaden 95, etc.
- GE-06 conformity check
- Frequency scan for finding alternative frequencies
- Coverage contour calculations
- Compatibility analysis and synthesis
- Field strength prediction models: ITU-R P.370-7 and ITU-R P.1546-2
